

Multiplayer

Giftscop features online multiplayer. Information on server rules, how to connect, and more, may be found below.

Rules

In multiplayer, **you must follow the rules, otherwise you are risking a permanent ban**. The multiplayer rules are as follows:

1. **Be respectful**; Don't be rude, mean, exclusionary, or discriminatory.
 - Discrimination towards things such as race, gender (+identities), sexuality, etc. is **NOT** tolerated.
2. **Keep things appropriate**; No adult content, inflammatory/controversial chatting.
 - NSFW is **NOT** allowed (sexual content, heavy gore) - you will be banned.
 - Do not make people uncomfortable.
3. **No impersonation**; Do not pretend to be someone else.
4. **No spamming**; Don't be bothersome, don't spam needles piano inputs.
5. **No brigading**; Do not target people, groups, etc. or bring drama into multiplayer.
6. **Follow Discord's ToS**; Since multiplayer requires a Discord account, we expect you to follow its [Terms of Service](#).
 - **This includes their age requirements**. Discord requires server operators to enforce this aggressively for legal reasons; accounts will be banned even for joking about being underage.
7. **No advertising**; Do not use multiplayer to direct people to join a separate Discord server, to visit any external websites, or anything similar.

-
- Rules apply to **ALL** forms of in-game communication, at **ALL** times, even if you are the only person online.
 - Staff can view server logs. Violating a rule when no staff members are online may still result in a ban.
 - Do not attempt to find loopholes - this will be treated as knowingly violating the rules.
 - Attempting to evade a ban will result in the new account being permanently banned, and revoke the possibility of appealing the original ban.
 - Breaking a rule as a joke is still punishable: If you break a rule as a joke, expect to be banned as a joke.

Moderators can kick or ban players from multiplayer who violate the rules.

If you see a problem in multiplayer, you may report it to a moderator in [our Discord server](#).

Connecting

- You can connect to the server by running the `gsmp` file (**Giftscop Multiplayer**), found in the same folder as the Giftscop executable file.
 - On Windows, `gsmp` is located in the same folder as the regular executable you use when playing Giftscop; if you have a desktop shortcut, you may right click it and select "open file location" to access this folder.
 - On macOS, `gsmp` is located in the `/Applications` directory, alongside the regular application you open when playing Giftscop.
 - If you don't see `gsmp`, you're probably either checking the wrong location or using a very outdated version of Giftscop.
- If it is your first time connecting, or if you have not connected recently, you will need to log in using a Discord account. To do this, click OK on the dialog box that opens upon trying to connect. You must leave Giftscop open as you do this.
 - When you click OK, it will open a browser window where you may authorize using [OAuth2](#).
 - You are not required to join our Discord server to play multiplayer, only an account is needed.
 - If the browser window does not open, your antivirus might be blocking it.
- Only the latest Giftscop version can connect to multiplayer. The latest version can be found [here](#).
 - Older versions, even if they supported multiplayer at the time of their release, cannot connect to multiplayer.
- There are not multiple servers, everyone connects to the same server.

Status

Here you may view how many players are currently online, and which locations are the most active.

Load

Functionality

To communicate with other players, you may use [P2 to TALK](#).

The appearance of other players is based on how it is shown to work in the original Petscop videos. Everyone sees themselves as the regular guardian, while other players have a different head. Giftscop treats things like Paul's copy of the game, and Paul is shown to appear with a red triangle head in Petscop 12. Because of this, other players will have a red triangle head, and you will have a red triangle head to other players.

Info

Multplayer is not yet supported in the [PlayStation version](#). We plan to add support in a future update.

User Data

This section lists the data we store on our systems when you access multiplayer, and how they are used. Those are:

- The Discord ID and username of the account used for authorization, and a hardware identifier
 - Used for user identification.
- All messages sent through P2 to TALK
 - Stored indefinitely for moderation purposes.
